

Original, wet ink signatures — from anywhere

Patented device with an HTML5 web based signing solution and pen that applies the remote ink signature

Each signature is unique, biometrically accurate & one-time use for legal, regulatory, & internal compliance adherence

Document operator manages paper-based documents on behalf of the remote signer

Document camera captures live images of the document so that the remote signer can see the exact document on their signing device

All transaction metadata including before and after snapshots of the signed paper document is captured in the MasterFile audit trail

Add recorded video sessions of a transaction to the MasterFile

Get the **convenience** of eSignatures and the **security** of ink on paper in one overarching solution.
